DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7 and 12-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Scoggins(US 6,469,587).

The reference by Scoggins discloses a filter circuit(203,201)(see figures 2 and 5), coupled to a VCO(202) which comprises MOSFET(see col. 11, lines 5-20)(insulated gate) varactors(V1,V2). A power supply(Vcc) and reference terminal(GND) are shown as well as the control terminal Vcntrl(see figure 5). As noted in col. 4, lines 25-47, the differential low pass filter shunt circuit(203,201) with connections to Vcc, reject high frequency noise from the VCO control input signal. The control signal having a polarity of the power supply signal and a magnitude less than or equal to the power supply magnitude as a result of the connections as shown. A charge pump is inherent in the PLL loop to supply the loop filter input signal, so as to derive the control voltage.

Allowable Subject Matter

3. Claims 8-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
